

# Basic Laser Cutting - Box

## Design

For the box, I used an image of a logo that my sister made for me for my website, and put my name on it just under the logo. I used a website called MakerCase ([makercase.com](http://makercase.com)) that has an SVG laser cutting box generator on it. I used this website to create the box cutout itself, at a size of 4 inches in width, 4 inches in length, and 2 inches in height. Then, I applied my image and text on top of that. Overall, much like the keychain since they were together, the print on both cardboard and wood went well, with no major hiccups.
